

Problem-Solution Fit Canvas

Date	7 July 2026
Team ID	SWTID-2026-3702
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

Use the framework below to ensure the proposed solution accurately addresses the root causes, behaviors, and limitations of the target audience for the HDI Predictor.

1. CUSTOMER SEGMENTS [CS] Researchers, policy makers, government analysts, students of economics & public policy, UNDP/World Bank staff.	6. CUSTOMER LIMITATIONS [CL] Limited programming skill, budget constraints, time pressure. Needs only a web browser to use.	5. AVAILABLE SOLUTIONS [AS] Manual spreadsheets (slow), UNDP lookup (not predictive), Python scripts (needs skill). Pros/cons noted.
2. PROBLEMS / PAINS [PR] HDI computation is complex and slow. No interactive real-time tool exists. Frequency: daily for researchers.	9. PROBLEM ROOT CAUSE [RC] Lack of accessible ML-based HDI tools. Data exists but isn't modeled for real-time, interactive prediction.	7. BEHAVIOR + INTENSITY [BE] Regular use of statistics portals, moderate use of viz tools, infrequent ML tool use. High intensity for research.
3. TRIGGERS TO ACT [TR] New budget planning cycle, research paper deadlines, annual UNDP HDI Report release, policy review meetings.	10. YOUR SOLUTION [SL] Flask web app with trained Linear Regression model. 5-field HTML form. Real-time HDI score + category classification (Low/Medium/High/Very High). EDA visualizations included in the ML pipeline.	8. CHANNELS OF BEHAVIOR [CH] ONLINE: GitHub, Kaggle, academic portals, UNDP website. OFFLINE: Government offices, universities, research institutions, policy workshops.
4. EMOTIONS BEFORE/AFTER [EM] Before: overwhelmed, frustrated, time-pressured. After: empowered, informed, confident in decisions.
