

Project Initialization and Planning Phase

Date	7 July 2026
Team ID	SWTID-2026-3702
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

A well-articulated customer problem statement allows the team to focus on what matters and empathize with users. The following problem statements were identified for the HDI Predictor project.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policy maker in a developing country	Understand my country's development status	I can't easily predict or compare HDI scores	HDI computation requires complex multi-dimensional data	Frustrated and underinformed about policy gaps
PS-2	A researcher studying global development	Quickly identify low-HDI countries needing intervention	Existing tools are static and not predictive	There is no simple ML-based interactive HDI predictor	Concerned about the lack of accessible analytical tools
PS-3	A student learning about global economics	Explore how life expectancy and GNI impact HDI	I need real data and a live model to experiment with	Public datasets aren't easy to model interactively	Motivated but lacking practical tools to explore
PS-4	A government analyst	Assess whether new policies will improve HDI score	Predictions require complex economic models	ML-based tools for HDI prediction are not publicly available	Eager to find a practical and accessible prediction system
