Empathy Map

Create an empathy map to understand the user from four perspectives — what they Say, Think, Do, and Feel in relation to the HDI prediction problem.

PERSONA: Policy Maker / Researcher / Government Analyst

SAYS 'I need a quick way to estimate my country's HDI.' 'Can ML predict development scores accurately?' 'We need actionable data, not just raw statistics.'	THINKS 'Right indicators lead to accurate predictions.' 'Better predictions drive better policy decisions.' 'This helps identify where to invest resources.'
DOES Searches HDI rankings online manually for reference. Downloads UNDP/World Bank datasets for analysis. Reviews govt. reports on education & healthcare.	FEELS Overwhelmed by complexity of manual HDI computation. Hopeful when ML tools provide quick, clear predictions. Empowered by visual, instant results.
