

Project Executable Files

Date	7 July 2026
Team ID	SWTID-2026-3702
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

All executable and deployable files for the HDI Predictor project are listed below. The evaluator can run the application using the provided files and setup instructions.

Step 1: Submission Checklist

S.N o	Item to Submit	Submitted (Yes/No/NA)	File Location
1	Complete source code (all files and folders)	Yes	HDI_Predictor/ (root directory)
2	README / Setup Guide (instructions to run the project)	Yes	HDI_Predictor/README.md
3	requirements.txt / dependency file	Yes	HDI_Predictor/requirements.txt
4	Database schema / seed files	NA	No database used (flat file CSV)
5	Environment configuration file	NA	No .env needed (no API keys)
6	Deployed application URL	NA	Runs on localhost:5000
7	APK / Executable binary	NA	Web application (no mobile app)
8	Dockerfile / Containerization config	NA	Not containerized in current phase
9	Test files and test results	Yes	7.Project Documentation/Performance Testing.pdf
10	Demo video or walkthrough	Pending	To be recorded and uploaded

Step 2: File Inventory

File / Folder	Purpose	Size / Format
app.py	Flask backend — main application entry point	153 lines, Python
requirements.txt	All Python package dependencies	8 packages listed
model/HDI.pkl	Serialized trained Linear Regression model	732 bytes, Pickle

dataset/HDI.csv	HDI training dataset	195rows x 82 columns, CSV
templates/index.html	Landing page HTML template	~59 lines, HTML
templates/predict.html	Prediction input form	~163 lines, HTML
templates/result.html	Prediction result display	~164 lines, HTML
notebooks/hdi_model.ipynb	Complete ML pipeline notebook	Jupyter Notebook
plots/heatmap.png	Correlation heatmap visualization	PNG, 138KB
plots/strip_life_expectancy.png	Life expectancy vs HDI strip plot	PNG, 36KB
plots/strip_schooling.png	Mean schooling vs HDI strip plot	PNG, 37KB
plots/actual_vs_predicted.png	Model evaluation scatter plot	PNG, 62KB

Step 3: Setup & Run Instructions

Step	Command / Action	Description
1	cd HDI_Predictor	Navigate to project folder
2	pip install -r requirements.txt	Install all dependencies
3	jupyter notebook notebooks/hdi_model.ipynb	Run ML pipeline (generates HDI.pkl)
4	python app.py	Start Flask server on port 5000
5	Open http://127.0.0.1:5000	Access the web application
